EFI™ and Intec Printing Solutions announced a new partnership with the launch of EFI Fiery® digital front end for use with Intec printers at the end of August 2013. The Fiery digital front end offers users of Intec printers even greater color capability and workflow control than ever before!

“We are incredibly excited about the new partnership with EFI which ensures Intec continues to evolve within an ever changing print industry” states Ian Melville, managing director at Intec Printing Solutions. “And even more delighted to be able to offer our customers a flexible and scalable high-speed RIP and color management workflow that is the perfect solution for our range of digital printing solutions.”

The new high speed RIP and color management workflow software, Fiery XF for Intec, is based on the newly launched Fiery XF software Version 5, so it boasts all of the great features that set Fiery apart from other RIP’s in the market today. But it’s not just another Fiery RIP... we have uniquely configured the software to offer you more!

For ease of use a suite of default color profiles, to match Intec recommended media with page and media size type sets, are provided as standard with the RIP. And anyone requiring accurate color and high quality print results will benefit from the built in ISO color profiles and ability to control spot colors with available Pantone® libraries. Reduce your running costs by using one of our feature sets to convert text and line art from composite (CMYK) black to a true black using only the more cost effective black toner.

Offering modular software architecture the RIP offers users the capability to add advanced color options such as the Color Verifier.

“We are incredibly excited about the new partnership with EFI which ensures Intec continues to evolve within an ever changing print industry........
and Color Profiler, further expanding the user experience and meeting the needs for greater color control in the short-run print production marketplace.

Intec also offers the ES2000 color spectrophotometer to work in conjunction with these options. Just getting color correct is only part of the story. The Intec Fiery RIP solution is not just a RIP it is an entire workflow solution. Intec provides an initial default workflow but you can fully customize your own user interface to reflect the most common tasks you perform. Create workflows to streamline your whole production process from job creation to printing, through to print verification.

In a true production environment, laying up your jobs, booklet making or even simple step and repeating a single business card is critical to reduce time. Imposition features are offered to assist you in your layout requirements including booklet making, step and repeat, N-up and more functionality, reducing your designer’s time in laying up jobs and of course the digital accuracy improves positioning for cutting and reduces time in finishing your digital print. Enhanced scaling, rotating, aligning and cropping is also available.

No longer are you limited by language… multiple language support was a key factor for Intec and this has been addressed by EFI, ensuring we could offer the RIP in 30 languages from all the popular European languages to Korean, Japanese, Chinese Simplified, Chinese Traditional, Bulgarian, Bosnian, Croatian, Serbian, Catalan, Czech, Danish, Finnish, Greek, Hungarian, Macedonian, Dutch, Norwegian, Polish, Portuguese, Romanian, Russian, Slovenian, Swedish and Turkish.

The Intec Fiery bundle is a bespoke RIP/Workflow solution that is delivered on a powerful hardware platform providing support for both Mac and PC clients. The hardware has been configured to achieve the optimum speed required to process complex color files and is delivered, pre-installed from the factory, ensuring worry free installation.

Fiery XF for Intec can be optionally bundled with any one of the range of Intec digital color print solutions but to ensure maximum benefit, if purchased as a Fiery XF system, your print solution will benefit from a more attractive system price.

The combination of the Fiery digital front end and color management workflow, bespoke hardware platform and Intec’s range of digital color printing solutions ensures graphic arts professionals, print companies and anyone who requires great color and quality receive a unique print solution offering. It continues to ensure that anyone printing onto a broad spectrum of media receive a total ‘out of the box’ experience for unmatched productivity and performance.

Fiery XF for Intec will enable users to quickly and easily achieve stunning, precise and predictable quality output.

FREE BANNER EXTENSION TRAYS WITH YOUR NEW DMP450*

• Expand your product offering with Intec’s Large Format Banner Extension Trays, the perfect accessory for your DMP450 Heavy Stock Solution.

• The extended 1.2 meter (47”) feed and collection extension trays allow for the production of a wide range of oversized print. Movable magnetic guides are also included.
Intec continues to strive for high levels of customer service so are pleased to announce that we have joined with Kuehne + Nagel to offer our international customers the best service and competitive pricing for worldwide deliveries.

Kuehne + Nagel was founded in Germany and has grown rapidly over the past decade to become one of the world’s leading logistics providers. With over 100 year’s experience and with offices in over 100 countries to support their expansive client base, they offer outstanding service which we hope you will see over the coming months and years.

At Intec we are always looking to improve our customer service and regularly review our delivery pricing to ensure that we are always offering the best price to our customers. Kuehne + Nagel will work with Intec to ensure that we can offer competitive pricing when brokering out to Fedex and TNT.

Having secured themselves as the number one sea freight courier worldwide and one of the top three for airfreight, it ensures that they are the perfect partner to help us improve our service for our ever growing number of international partners.

To find out more about this exciting new product contact intec sales.

Following on from the fantastic response to the Intec EPP520 envelope printing solution, Intec have developed a new innovative solution for the envelope printing sector, the EPP550. The EPP550 is rolling off the production lines as we type and will be available for purchase from mid-September. It has been developed with a larger envelope requirement in mind and can print up to C4 and No. 10 ½ catalog envelopes. The solution boasts all of the great features of the smaller EPP520 and Intec printers’ wider substrate printing capability.

Comprising of an Intec XP2020 printer on printer stand which offers storage, a medium sized envelope feeder (MEF) and shingling conveyor for quality checking and packing, you can now print even larger envelopes, on demand and at an affordable price!
STRENGTHENING OLD AND CREATING NEW RELATIONSHIPS, RICHARD VISITS RUSSIA

Richard Castle, International Sales Manager from Intec UK has been busy continuing to build relationships with existing partners this month. Richard travelled to Russia to visit two successful and long standing partners; Rikom and Frank & Co. to talk to them about Intec’s existing products and the newly launched Fiery® XF for Intec RIP and workflow solution.

During his visit Richard spent the week conducting sales presentations on the upcoming products, as well as offering support on Intec’s existing product range.

Both Rikom and Frank and Co. were very excited about the new products and can’t wait to take them on.
EXHIBITION CENTRE
NUREMBERG
HALL 4 / 4-308

Pefi™ document and mailing solutions will be exhibiting the Intec EDGE 850 label printing solution at Fach Pack ’13 at the Nuremberg Exhibition Center. The three day event will be running from Tuesday 24th to Thursday 26th September 2013 and will be home to a whole host of big names from the packaging and logistics industry. Pefi will demonstrate the EDGE 850 showing affordable short run label printing.

Visit Pefi in hall 4, to see live demonstrations of the EDGE 850, a compact solution that is a must have for on demand label printing. The system is capable of printing on a variety of substrates, including matrix removed, matrix retained die cut stock as well as continuous label rolls ready for finishing and approved synthetics.

Fach Pack ‘13 presents pioneering products and solutions for packaging and logistics, concepts that are optimized to your process requirements for intelligent answers to packaging, technology, processing and logistics.

Talk to the experts that are on hand at this years event, including Peter Fischer of Pefi.

INTEC WAS A SHOW STOPPER AT PRINT ’13, CHICAGO

US Corporation have been busy demonstrating at Print ’13 at McCormick Place, Chicago, IL, USA. The event which took place on 8th - 12th September was home to the big names of print, including Intec. Print ’13 is the most comprehensive “selling” trade show for Digital, Offset, Flexo and Hybrid technologies, products and services for the Commercial, Transactional, Converting and Package Printing, Publishing, Mailing, In-Plant, Photo Imaging and Marketing industries. Intec secured a suite, off the main floor, where they demonstrated the DMP450 and it’s heavy stock capability. The Intec compact envelope feeder was also demonstrated, to show the ease of printing on demand envelopes from an Intec printer. The simple roll up and print capability of the unit lends itself to all print and office environments for envelopes up to 292mm x 255mm (11.49” x 10.03”).

Alongside these demonstrations, Intec Corporation used Print ’13 as a platform to launch the Fiery XF for Intec RIP which created a flood of interest. This new RIP platform has been designed to support the Intec range of print solutions for high quality print and precise color printing. It offers outstanding color management for both spot and process color, as well as great workflow features from built in imposition options, late color editing and advanced layout controls, to help you gain the most from your Intec print solution.

Michael Sparbeck, Chief Operating Officer of Intec Corporation, based in Tampa, Florida USA said “we have been looking forward to showing our unique product offering at Print ’13. The aim of the show was to build new relationships, and strengthen existing ones and I feel that we achieved this objective”.

James Godden has joined Intec UK as the new design and marketing executive working alongside Terri Winstanley, Head of Marketing and PR. James will be supporting all company departments including the US Corporation and partners who require marketing assistance.

Coming from a trend forecasting company where he designed brochures, apparel artwork and websites he boasts an all round design knowledge that will lend itself well to our digital printing machines. “I am delighted to have become a member of the Intec team at such an exciting time for the company and have been made to feel very welcome by the team in the UK office”.

James has already displayed a keen eye by improving current marketing materials, website graphics and working on new designs to be rolled out over the coming months. “James joins us with a wealth of experience, excellent design skills and as an expert PhotoShop re-toucher, I’m sure he will add a new and exciting element to our marketing collateral. I am delighted that James has joined the team as we move into a new phase of product launches” says Terri.

James can be contacted through the usual channels:

email: james.godden@intecprinters.com or +44 (0)1202 845960 ext: 221
